SHOULDER PRESS

FIXED

bodytone

The instructional card shows two diagrams of the exercise: 'Start' and 'Finish'. The 'Start' diagram shows a person standing with their feet shoulder-width apart, holding a barbell with their arms extended. The 'Finish' diagram shows the person with their arms extended upwards, pressing the barbell. The card also features a small illustration of a human figure with green highlights on the shoulders and arms.

MPATENTED SYSTEM P
EMPATENTED SYSTEM

Bodytone's patented technology allows the athlete to correct possible deviations in their stride thanks to the incorporation of a series of indicators in our treadmills.

The treadmill detects the impact of your stride in real time, indicating the quality of your stride on the screen and allowing you to correct possible deviations. This technology will allow you to help your clients improve their running technique and prevent injuries. In addition, the Biofeedback system is compatible with the MyBodytone application.

Patent number US2020353309A1.

DISCOVER ABOUT THE
BIOFEEDBACK SYSTEM

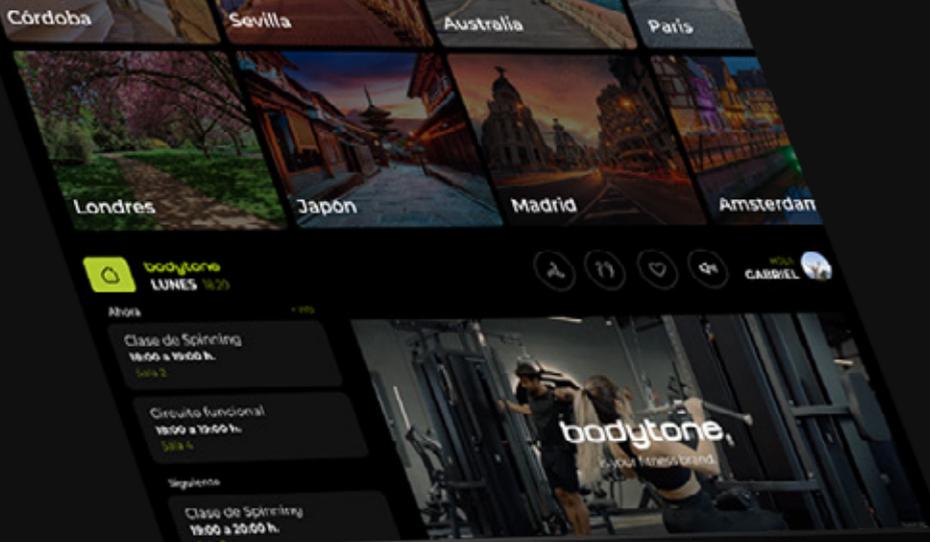

CONNECTED CONNECTED EVERYWHERE

One of Bodytone's priorities is to make sport easier and more accessible for people. For this reason, we strive to ensure that our products are connected to the maximum number of applications and technologies and, thus, be able to provide the maximum experience to users.

Thus, our machines are compatible with Trainingym, the management software that gives added value to gyms and training centers with which the user can also track their exercises. In addition, we have connectivity with Strava, Google Fit and Apple Health, to record physical activity so that the user can enjoy training while watching their favorite series or movies.

ABOUT CONNECTIVITY
bodytone

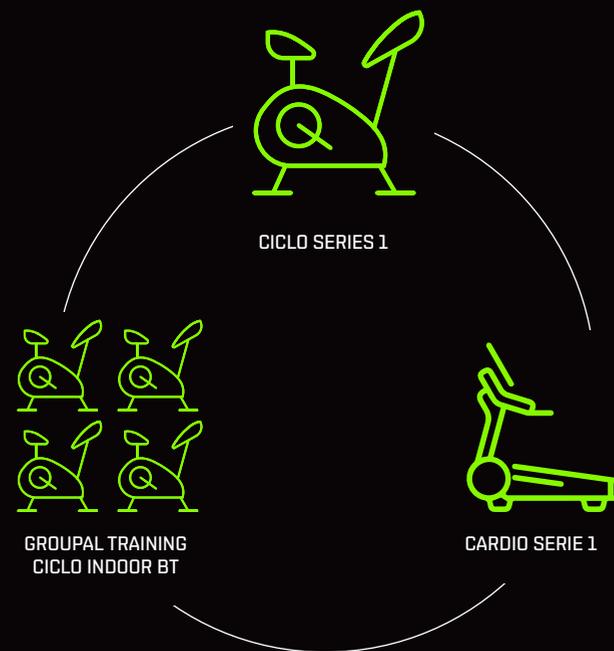

MYBODYTONE MYBODYTONE MYBODYTONE

mybodytone

MyBodytone is the exclusive app for our EVO series machines. It is the main application that monitors all your activities and synchronizes them with the main sports applications on the market. Within your account you can enter your user data in the application of your choice and MyBodytone will save it for your next sessions. When you finish your training it will automatically synchronize with the previously selected apps.

With MyBodytone you can immerse yourself in the most diverse scenarios and forget about time.

REGISTER

Your workouts are sent via Wifi through the MyBodytone app.

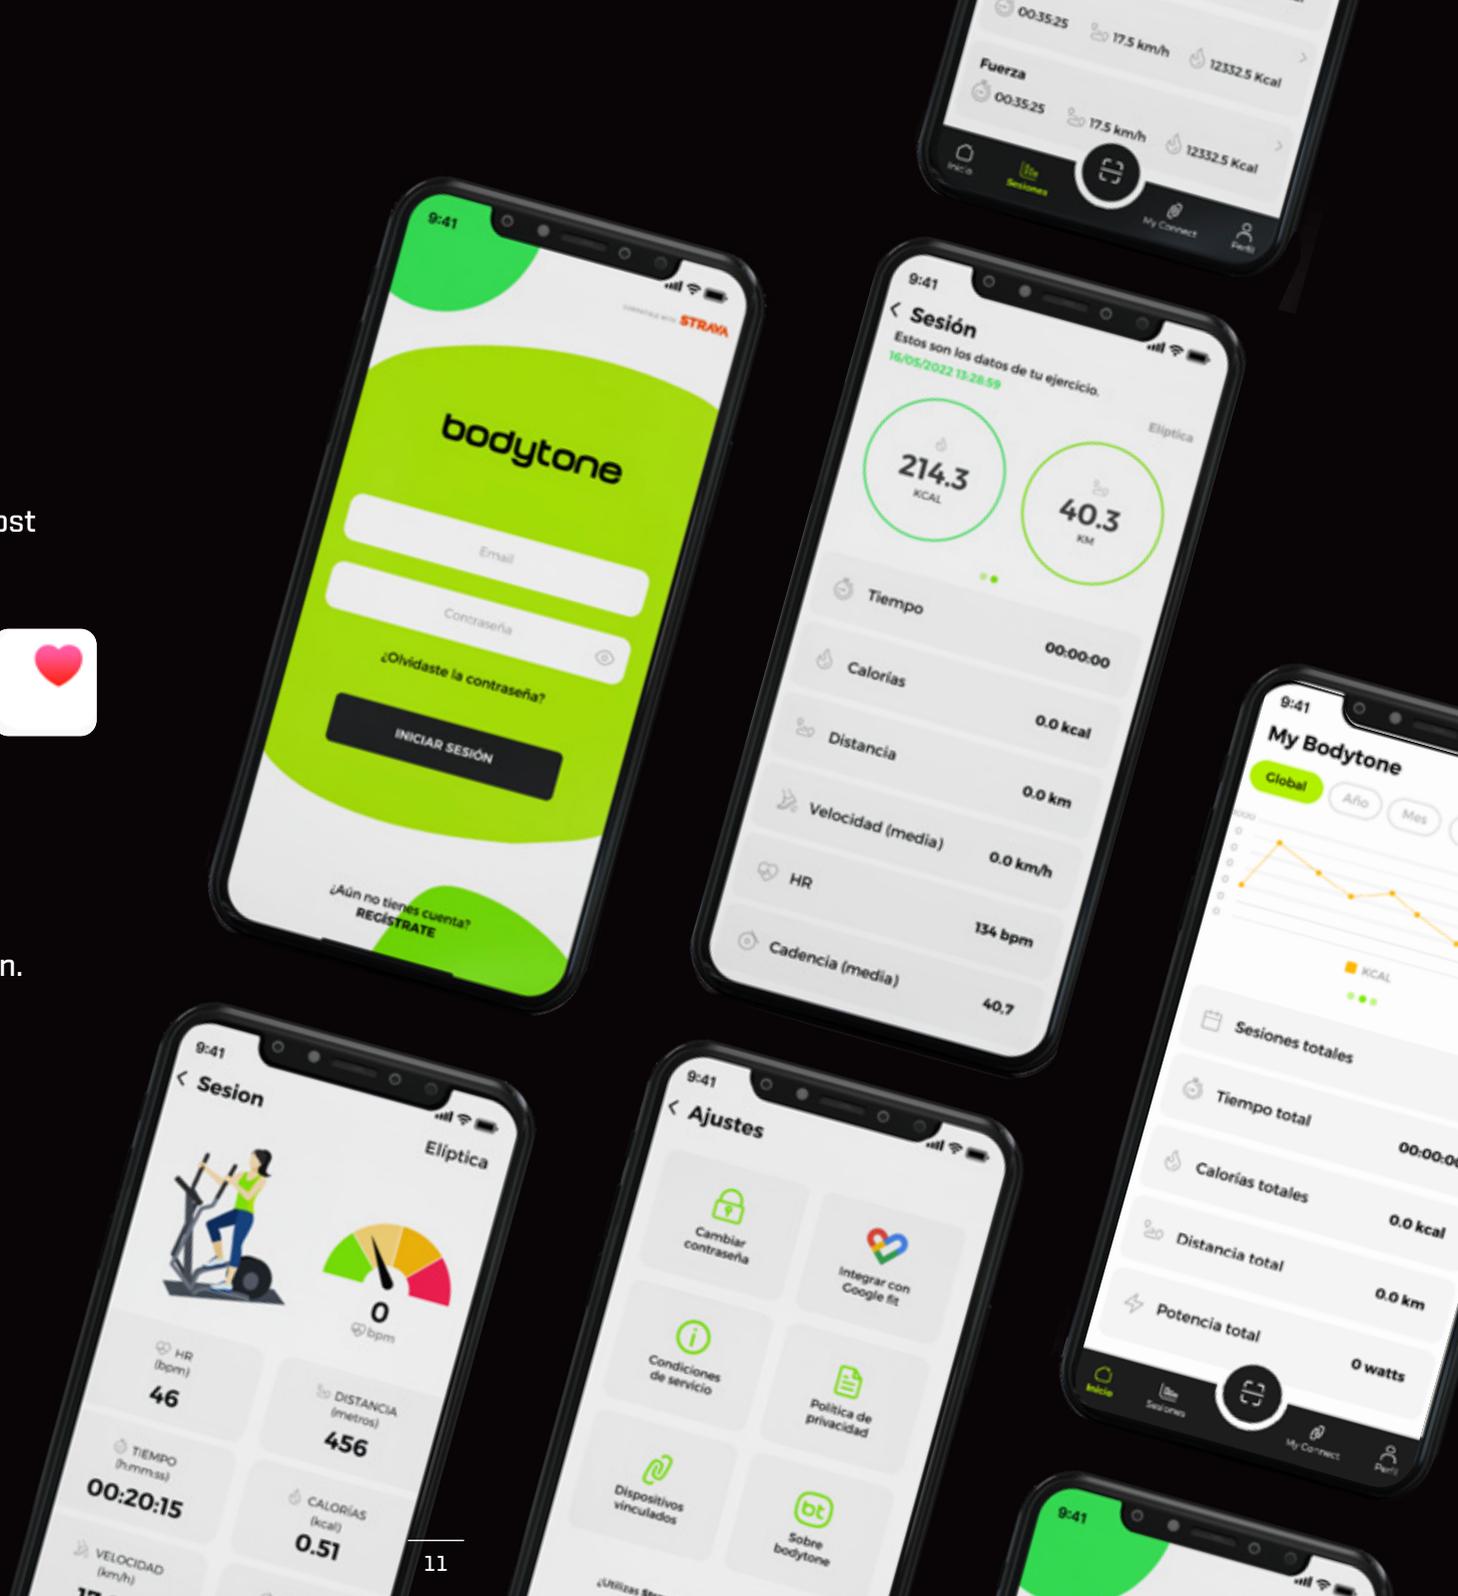

SYNC

Your statistics recorded in the most important training applications.

REVIEW

Review your training history and statistics from the application.

IT'S ALL ABOUT POWER

THE MOST PRECISE MEASUREMENT IN THE MARKET

Power training finally comes to Bodytone.

Develop your full potential and optimize your training thanks to more precise intensity control with watt (W) measurement. Through power training we can objectively know the effort we are making in real time to improve our performance, avoiding possible injuries caused by excessive training.

WTI bikes have a group connectivity system through which spin class users can observe their performance together, with that of their peers and thus enhance the motivation of the group.
